Summary

Computer Science graduate focused on Machine Learning and scalable AI systems. Skilled in leveraging transfer learning to build deep learning models (PyTorch, OpenCV) and deploying containerized inference pipelines (FastAPI, Docker) for production scale. Passionate about optimizing GPU workloads and shipping low-latency AI applications.

Experience

Research Intern | Elite Research Lab AI, Remote — July 2026 - Present

- Developed and implemented state-of-the-art Computer Vision and Deep Learning models.
- Accelerated model experimentation workflows to drastically shorten training-to-evaluation cycles.

ML Engineer Intern | FlyRank AI, Remote — July 2026 - Sept 2026

- Engineered momentum and volatility features using DuckDB for large client search-ranking datasets.
- Optimized ranking prediction pipelines using robust RandomForest models to eliminate data leakage.

Support Engineer | Softghor Ltd, Dhaka, Bangladesh — Aug 2024 - Nov 2024

- Analyzed 50+ diagnostic logs, successfully cutting technical resolution time by 35%.
- Tracked 30+ bugs with QA, speeding releases by 20% and reducing support repeat by 40%.

Skills

Languages	:	Python, SQL, JavaScript, CSS, HTML
AI & Machine Learning	:	PyTorch, Scikit-learn, Hugging Face, OpenCV, YOLO, MLflow, LangGraph, CrewAI, MCP
Databases	:	PostgreSQL, MongoDB, Vector Databases (Pinecone/Chroma)
Model Serving	:	ONNX, Ray, FastAPI, Docker, AWS SageMaker, CI/CD

Projects

Delivery Vision MCP

- Built an MCP server exposing YOLO vision models as tools for AI agents (Claude Desktop, Claude Code, Cursor).
- Implemented damage severity scoring, batch detection (20 images), parcel counting, helmet and vehicle-type checks.

Technologies: **YOLO, MCP, Claude Desktop, Claude Code, Cursor**

Support Flow Studio

- Built a 5-step CrewAI Flow that categorizes support tickets with an LLM on Groq and routes each to a category handler.
- Added a keyword-rule fallback for LLM outages; served via FastAPI with a web UI to submit and rate tickets.

Technologies: **CrewAI Flows, FastAPI, Groq, Pydantic**

Jaal Taka: Banknote Counterfeit Detection

- Built a custom 3-block CNN in PyTorch to classify banknotes as real or fake, trained on 600 images of 50 note types.
- Served the model through a FastAPI app with an upload UI and a prediction API returning label and confidence.

Technologies: **PyTorch, CNN, FastAPI, Jinja2**

Amazon Review Sentiment Analyzer

- Built a BiLSTM sentiment classifier with Bahdanau attention in PyTorch, trained on 60K Amazon reviews.
- Served the model via FastAPI with single and batch prediction REST endpoints and an interactive frontend.

Technologies: **PyTorch, BiLSTM, Attention, FastAPI**

Education

Dhaka International University — Dhaka, Bangladesh
Bachelor of Computer Science and Engineering — **CGPA: 3.43 / 4.00**

Certifications

Machine Learning Internship – Certificate of Completion, FlyRank Corp.
Model Context Protocol – Certificate of Completion, Anthropic
PyTorch Bootcamp – Certificate of Excellence, OpenCV University
AI Workflows and Agents – Certificate of Excellence, Grameenphone Academy

Awards & Achievements

1st Place, AI Bootcamp – Grameenphone Academy, GP House

- Winning team at the in-person AI Bootcamp; featured in The Daily Star and The Business Standard.
